Patient Safety and Quality 2008 "Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." --Online AHRQ blurb, <http://www.ahrq.gov/qual/nurseshdbk>.

Meaningful Scents Around the World Roman Kaiser 2006-09-14 In recent years, our knowledge of the anatomy and physiology of olfaction has grown enormously, accompanied by a growing appreciation of scent. This is reflected in the fact that the 2004 Nobel Prize in Medicine was awarded for discoveries of 'Odorant Receptors and the Organization of the Olfactory System'. This book naturally supports such developments, and takes the reader on a fascinating fragrant journey around the world to some of the exciting places the author has visited during his 30 years of olfactory research. Following an introductory section to the world of natural scents, including their biological meaning and history, the fragrance and flavor chemist, Roman Kaiser, who is renowned for his 'headspace' analytical technique, revisits some memorable scents. In doing so, he leads us to such exotic places as Lower Amazonia, Papua New Guinea, India, and many rain-forest biotopes in his quest for new molecules and new scent concepts, showing us along the way how a scent like tatami can be linked to culture. The third and final section describes the analysis of the compositions of the presented scents.

The Kaiser Alan Palmer 1978 "Wilhelm II or William II (German: Friedrich Wilhelm Viktor Albrecht; English: Frederick William Victor Albert) (27 January 1859? 4 June 1941) was the last German Emperor (Kaiser) and King of Prussia, ruling the German Empire and the Kingdom of Prussia from 15 June 1888 to 9 November 1918. He was a grandson of the British Queen Victoria and related to many monarchs and princes of Europe. Crowned in 1888, he dismissed the Chancellor, Otto von Bismarck, in 1890 and launched Germany on a bellicose "New Course" in foreign affairs that culminated in his support for Austria-Hungary in the crisis of July 1914 that led to World War I. Bombastic and impetuous, he sometimes made tactless pronouncements on sensitive topics without consulting his ministers, culminating in a disastrous Daily Telegraph interview that cost him most of his power in 1908. His generals dictated policy during World War I with little regard for the civilian government. An ineffective war leader, he lost the support of the army, abdicated in November 1918, and fled to exile in the Netherlands."-- Wikipedia.

Greening Health Care Kathy Gerwig 2014-07-24 The relationship between hospitals and the environment is defined by a glaring contradiction: as health care facilities deliver care at any cost, their environmental footprint -- pollution, waste production, unsustainable food services -- contributes to harming community health. *Greening Health Care* examines the intersections of health care and environmental health, both in terms of traditional failures and the revolution underway to fix them. Authored by one of the pioneers in health care's green movement, it presents practical solutions for health care organizations and clinicians to improve their environments and the health of their communities. Topics include: making food services sustainable, managing hospital waste, and relevant impacts/mitigating measures related to climate change. As environmental protection grows into an imperative for all aspects of society, *Greening Health Care* offers an historical and practical approach to sustainable health care delivery.

Surviving the Swastika Kristie Macrakis 1993 A study of the Kaiser Wilhelm Gesellschaft in the Nazi period. Ch. 3 (p. 51-72), "From Accommodation to Passive Opposition, 1933-35," discusses the dismissal of Jews from the various institutes. Max Planck tried to protect his Jewish colleagues from the Nazi authorities, but in vain. The only act of resistance undertaken by the scientists was the Fritz Haber Memorial Ceremony in 1935 (Haber, a Jewish scientist, died in Switzerland in 1934); the Nazis reluctantly allowed it to be held.

Birth Settings in America National Academies of Sciences, Engineering, and Medicine 2020-05-01 The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. *Birth Settings in America: Outcomes, Quality, Access, and Choice* reviews and evaluates maternal and newborn care in the United States, the prevalence of social determinants of physical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.

Quantum Physics, Relativity, and Complex Spacetime Gerald Kaiser 1990 A new synthesis of the principles of quantum mechanics and Relativity is proposed in the context of complex differential geometry. The positivity of the energy implies that wave functions and fields can be extended to complex spacetime and other Hermitian complexification has a solid physical *Welding Kaiser Aluminum* phase space. The extended fields can be said to be the Kaiser's Daughter transforms of the original fields. A new, algebraic theory of wavelets is developed.

Is There a Doctor in the House? Richard M. Scheffler 2008 This data-driven book analyzes factors that will improve the efficiency and quality of the American health care delivery system through the lens of physician supply in an era of managed care. Presenting policy recommendations and a broad range of perspectives from conversations with experts in health economics, medical education, and health policy, Scheffler's work makes accessible a critical and complex area of health care.
