Stuntman! Hal Needham 2011-02-09 The classic no-holds-barred memoir from Hollywood's most legendary stuntman -- an inspiration for Brad Pitt's character Cliff Booth in *Once Upon a Time in Hollywood* -- is "full of incredible stories as told by a real man of action" (Arnold Schwarzenegger). Yep that's me, Hal Needham, on the cover doing a fire stunt. When you're on fire you don't dare breathe because if you do, you'll suck those flames right down your throat. I was Hollywood's highest paid stuntman so I should know. I wrecked hundreds of cars, fell from tall buildings, got blown up, was dragged by horses, and along the way broke 56 bones, my back twice, punctured a lung and knocked out a few teeth...I hung upside down by my ankles under a bi-plane in *The Spirit of St. Louis*, jumped between galloping horses in *Little Big Man*, set a world record for a boat stunt on *Gator*, jumped a rocket powered pick-up truck across a canal for a GM commercial, was the first human to test the car airbag-and

taught John Wayne how to really throw a movie punch. Life also got exciting outside of the movie business. I had my Ferrari stolen right from under my nose, flew in a twin-engine Cessna with a passed out pilot, rescued the cast and crew from a Russian invasion in Czechoslovakia, and once took six flight attendants on a date. I owned the Skoal-Bandit NASCAR race team, the sound-barrier breaking Budweiser Rocket Car and drove a souped-up, fake ambulance in a "little" cross-country race called *The Cannonball Run*, which became the movie I directed by the same name. Oh yeah, I also directed *Smokey and the Bandit*, *Hooper* and several other action/comedy movies that I liked a bunch. I was a sharecropper's son from the hills of Arkansas who became a Hollywood stuntman. That journey was a tough row to hoe. I continually risked my life but that was the career I chose. I was never late to the set and did whatever I had to do to get the job done. Hollywood's not all sunglasses and autographs. Let me tell you a few stories...

Corvette from the Inside Dave McLellan 2002 Celebrations begin this year to mark the 50th Anniversary of the Chevrolet Corvette. There's no one more qualified than Dave McLellan to reflect upon the remarkable endurance of this legendary American icon. Dave McLellan belongs to a select group by having been the second of only three Corvette Chief Engineers to date. He is also the very first Corvette Chief Engineer to sit down and write his view of the incredible story of America's foremost sports car. In *Corvette from the Inside* Dave McLellan talks about his years at the center of Corvette Engineering, his take on Corvette history and many of the details that have made the Corvette a perennial favorite with millions of Americans. As McLellan describes the incredible highs and lows in the life of the Corvette, he also paints the bigger picture of the American auto industry's ability to rebuild itself whenever its survival is threatened. McLellan uses every tool at his disposal to tell his story, including original sketches and charts drawn by him exclusively for this book, scores of archival photos from GM, photos from his personal collection, and of course his own first-hand memories of 32 years at General Motors. Whether you're interested in the Corvette from an engineering perspective or simply a fan of the celebrated sports car, you'll want to own a copy of Dave McLellan's *Corvette from the Inside*.

Health-Related Emergency Disaster Risk Management (Health-EDRM). Emily Ying Yang Chan 2020 Disasters such as earthquakes, cyclones, floods, heat waves, nuclear accidents, and large scale pollution incidents take lives and cause exceptionally large health problems. The majority of large-scale disasters affect the most vulnerable populations, which are often comprised of people of extreme ages, in remote living areas, with endemic poverty, and with low literacy. Health-related emergency disaster risk management (Health-EDRM) [1] refers to the systematic analysis and management of health risks surrounding emergencies and disasters; it plays an important role in reducing hazards and vulnerability along with extending preparedness, response, and recovery measures. This concept encompasses risk analyses and interventions, such as accessible early warning systems, timely deployment of relief workers, and the provision of suitable drugs and medical equipment, to decrease the impact of disaster on people before, during, and after disaster events. Disaster risk profiling and interventions can be at the personal/household, community, and system/political levels; they can be targeted at specific health risks including respiratory issues caused by indoor burning, re-emergence of infectious disease due to low vaccination coverage, and gastrointestinal

problems resulting from unregulated waste management. Unfortunately, there has been a major gap in the scientific literature regarding Health-EDRM. The aim of this Special Issue of IJERPH was to present papers describing/reporting the latest disaster and health risk analyses, as well as interventions for health-related disaster risk management, in an effort to address this gap and facilitate major global policies and initiatives for disaster risk reduction.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F.

El-Sayed 2016-05-25 This book provides a comprehensive basic-

to-advanced course in an aero-thermal science vital to the design

of engines for either type of craft. The text classifies engines

powering aircraft and single/multi-stage rockets, and derives

performance parameters for both from basic aerodynamics and

thermodynamics laws. Each type of engine is analyzed for

optimum performance goals, and mission-appropriate engines

selection is explained. Fundamentals of Aircraft and Rocket

Propulsion provides information about and analyses of:

thermodynamic cycles of shaft engines (piston, turboprop,

turboshaft and propfan); jet engines (pulsejet, pulse detonation

engine, ramjet, scramjet, turbojet and turbofan); chemical and

non-chemical rocket engines; conceptual design of modular

rocket engines (combustor, nozzle and turbopumps); and

conceptual design of different modules of aero-engines in their

design and off-design state. Aimed at graduate and final-year

undergraduate students, this textbook provides a thorough

grounding in the history and classification of both aircraft and

rocket engines, important design features of all the engines

detailed, and particular consideration of special aircraft such as

unmanned aerial and short/vertical takeoff and landing aircraft.

End-of-chapter exercises make this a valuable student resource,

and the provision of a downloadable solutions manual will be of

further benefit for course instructors.

Aircraft Design Ajoy Kumar Kundu 2010-04-12 Aircraft Design

explores fixed winged aircraft design at the conceptual phase of a

project. Designing an aircraft is a complex multifaceted process

embracing many technical challenges in a multidisciplinary

environment. By definition, the topic requires intelligent use of

aerodynamic knowledge to configure aircraft geometry suited

specifically to the customer's demands. It involves estimating

aircraft weight and drag and computing the available thrust from

the engine. The methodology shown here includes formal sizing of the aircraft, engine matching, and substantiating performance to comply with the customer's demands and government regulatory standards. Associated topics include safety issues, environmental issues, material choice, structural layout, understanding flight deck, avionics, and systems (for both civilian and military aircraft). Cost estimation and manufacturing considerations are also discussed. The chapters are arranged to optimize understanding of industrial approaches to aircraft design methodology. Example exercises from the author's industrial experience dealing with a typical aircraft design are included.

Scootermania Josh Sims 2015-11-05 From its origins the Italian battlefields of the Second World War, to movie roles as Audrey Hepburn's transport in Roman Holiday and Sting's stylish companion in Quadrophenia and on through the current vintage revival, the classic Italian motor scooter is an enduring design classic from the 20th century. Scootermania celebrates the superbly simple vehicles that are so symbolic of freedom, style and the modern world. Originating in the 1940s in Milan and Pontedera, Tuscany, the scooter became an enduring transport choice for young people and urban environments. Early chapters look at scooter racing and long-distance attempts, and their role as an anti-tank weapon in the French army. There is engaging coverage of place of scooters in popular culture from films, music and fashion including the way that a host of disparate groups has made the bikes their own - from the British Mods of the 1960s and 1980s to their role in American and Japanese fashion and in their Italian homeland. The evolution and design of classic models as the Vespa 150 GS and the Lambretta Li 150 Series 3 are covered while scooter stars such as Enrico Piaggio and Georges Monneret are celebrated in their own words. The book also includes a number of specially photographed features on modern scooter designers, collectors and artists.

In-Flight Simulators and Fly-by-Wire/Light Demonstrators Peter G. Hamel 2017-03-15 This book offers the first complete account of more than sixty years of international research on In-Flight Simulation and related development of electronic and electro-optic flight control system technologies ("Fly-by-Wire" and "Fly-by-Light"). They have provided a versatile and experimental procedure that is of particular importance for verification, optimization, and evaluation of flying qualities and flight safety of manned or unmanned aircraft systems. Extensive coverage is given in the book to both fundamental information related to flight testing and state-of-the-art advances in the design and implementation of electronic and electro-optic flight control systems, which have made In-Flight Simulation possible. Written by experts, the respective chapters clearly show the interdependence between various aeronautical disciplines and in-flight simulation methods. Taken together, they form a truly multidisciplinary book that addresses the needs of not just flight test engineers, but also other aeronautical scientists, engineers and project managers and historians as well. Students with a general interest in aeronautics as well as researchers in countries with growing aeronautical ambitions will also find the book useful. The omission of mathematical equations and in-depth theoretical discussions in favor of fresh discussions on innovative experiments, together with the inclusion of anecdotes and fascinating photos, make this book not only an enjoyable read, but also an important incentive to future research. The book, translated from the German by Ravindra Jategaonkar, is an extended and revised English edition of the book *Fliegende Simulatoren und Technologieträger*, edited by Peter Hamel and published by Appelhans in 2014.

Carbon Fibers Soo-Jin Park 2014-10-08 This book contains eight chapters that discuss the manufacturing methods, surface treatment, composite interfaces, microstructure-property relationships with underlying fundamental physical and mechanical principles, and applications of carbon fibers and their composites. Recently, carbon-based materials have received much attention for their many potential applications. The carbon fibers are very strong, stiff, and lightweight, enabling the carbon materials to deliver improved performance in several applications

such as aerospace, sports, automotive, wind energy, oil and gas, infrastructure, defense, and semiconductors. However, the use of carbon fibers in cost-sensitive, high-volume industrial applications is limited because of their relatively high costs. However, its production is expected to increase because of its widespread use in high-volume industrial applications; therefore, the methods used for manufacturing carbon fibers and carbon-fiber-reinforced composites and their structures and characteristics need to be investigated.

Vespa - The Story of a Cult Classic in Pictures Günther Uhlig

2015-06-15 Eighteen million Vespas have buzzed their way into the world since 1946. Stood end to end, they would form a line measuring 32,000 kilometres - 20,000 miles - in length. This is an almost inconceivable statistic, as with many things that transcend conventional measures and at some point achieve cult status.

How did the little machine come so far? The answer is simple.

The Vespa has always remained the Vespa, true to itself, and has what others lack: real character! This book tells the Vespa's story via over 470 photos, corrects many misconceptions and lets the reader become immersed in the culture of Vespa and la bella vita.

Arms Industry Transformation and Integration Yudit Kiss 2014

The defence industry was one of the pillars of the classic command economy system in Central Europe. Since the early 1990s the sector has gone through dramatic changes. It was radically downsized, reorganized and restructured according to the needs of the emerging new socio-economic systems. One of the major factors that shaped this adjustment was the enlargement of NATO and the European Union and the prospect of integration into these two organizations. The military establishments and defence industries became principal actors in the integration process, which helped them to acquire new economic resources and political legitimization. At the same time, integration presented unexpected new challenges and constraints for the restructuring defence industry in the region. This report describes how the defence industry adjusted to the changed political and economic environment in both the domestic and international context. The comparative analysis of the post-cold war experience of six Central European countries - Bulgaria, the Czech Republic, Hungary, Poland, Romania and Slovakia, which joined in the first two waves of enlargement - provides valuable lessons for other countries in their processes of socio-economic transformation.

Werewolf: The Apocalypse is about anger over the loss of what the shapeshifting Garou hold dearest: Gaia, the Earth itself. Corruption from without and within has caused the destruction not only of the Garou's environment, but also of their families, friends and culture, which extends in an unbroken line to the very dawn of life. No matter how righteously the Garou hold themselves, no matter how they prey on their destroyers, the corruption spreads. Now the time for reconciliation is past. This grave insult against Gaia can end in only one way: blood, betrayal... and rage. Details the werocrocodilians of the World of Darkness.
