2018-08-24 Rely on this practical, end-to-end  
guide on cyber safety and online security written  
expressly for a non-technical audience. You will  
have just what you need to protect  
yourself—step by step, without judgment, and  
with as little jargon as possible. Just how secure  
is your computer right now? You probably don't  
really know. Computers and the Internet have  
revolutionized the modern world, but if you're  
like most people, you have no clue how these  
things work and don't know the real threats.  
Protecting your computer is like defending a  
medieval castle. While moats, walls,  
drawbridges, and castle guards can be effective,  
you'd go broke trying to build something dragon-  
proof. This book is not about protecting yourself  
from a targeted attack by the NSA; it's about  
armoring yourself against common hackers and  
mass surveillance. There are dozens of no-  
brainer things we all should be doing to protect  
our computers and safeguard our data—just like  
wearing a seat belt, installing smoke alarms, and

Chips 2020 Bernd Hoefflinger 2012-01-19 The chips in present-day cell phones already contain billions of sub-100-nanometer transistors. By 2020, however, we will see systems-on-chips with trillions of 10-nanometer transistors. But this will be the end of the miniaturization,

because yet smaller transistors, containing just a few control atoms, are subject to statistical fluctuations and thus no longer useful. We also need to worry about a potential energy crisis, because in less than five years from now, with current chip technology, the internet alone would consume the total global electrical power! This book presents a new, sustainable roadmap towards ultra-low-energy (femto-Joule), high-performance electronics. The focus is on the energy-efficiency of the various chip functions: sensing, processing, and communication, in a top-down spirit involving new architectures such as silicon brains, ultra-low-voltage circuits, energy harvesting, and 3D silicon technologies. Recognized world leaders from industry and from the research community share their views of this nanoelectronics future. They discuss, among other things, ubiquitous communication based on mobile companions, health and care supported by autonomous implants and by personal carebots, safe and efficient mobility

### **Global Mobile Satellite Communications**

Stojce Dimov Ilcev 2005-12-05 Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircrafts, and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers. Mobile satellite

communications and technology have been in use for over two decades. Its initial application is aimed at the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. Global Mobile Satellite Communications is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphicons, illustrations and

mathematics equations. Global Mobile Satellite Communications represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and

rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.
