The Physics of Musical Instruments Neville H. Fletcher 2013-11-09 While the history of musical instruments is nearly as old as civilisation itself, the science of acoustics is quite recent. By understanding the physical basis of how instruments are used to make music, one hopes ultimately to be able to give physical criteria to distinguish a fine instrument from a mediocre one. At that point science may be able to come to the aid of art in improving the design and performance of musical instruments. As yet, many of the subtleties in musical sounds of which instrument makers and musicians are aware remain beyond the reach of modern acoustic measurements. This book describes the results of such acoustical investigations - fascinating intellectual and practical exercises. Addressed to readers with a reasonable grasp of physics who are not put off by a little mathematics, this book discusses most of the traditional instruments currently in use in Western

music. A guide for all who have an interest in music and how it is produced, as well as serving as a comprehensive reference for those undertaking research in the field.

Radar Instruction Manual United States. Maritime Administration 2005 Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested

Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Better Game Characters by Design Katherine Isbister
2018-04-30 Games are poised for a major evolution, driven by growth in technical sophistication and audience reach. Characters that create powerful social and emotional connections with players throughout the game-play itself (not just in cut scenes) will be essential to next-generation games. However, the principles of sophisticated character design and interaction are not widely understood within the game development community. Further complicating the situation are powerful gender and cultural issues that can influence perception of characters. Katherine Isbister has spent the last 10 years examining what makes interactions with computer characters useful and engaging to different audiences. This work has revealed that the key to good design is leveraging player psychology: understanding what's memorable, exciting, and useful to a person about real-life social interactions, and applying those insights to character design. Game designers who create great characters often make use of these psychological principles without realizing it. Better Game Characters by Design gives game design professionals and other interactive media designers a framework for understanding how social roles and perceptions affect players' reactions to characters, helping produce stronger designs and better results.

Echoes Jane Yang 2021-02-22 About Echoes During

2019-2020 I wrote over 300 short poems in a state of both great euphoria and agony, like giving birth to a baby. It's just like an everlasting rainy day and I danced in the wind and rain of poetic melodies, and wrote down something unexpected. These words are wild flowers blossoming at the end of summer and the pearls of grey traumas. I engraved the bloody fragrance of tabooed love on the pillar of marble stone and witnessed it wither and revive in the torrent of time. There are also endless metaphysical inquiries in my mind and I'm always on the road towards the light of truth which we can only approximately approach. We human beings live and think on the net fabricated by language where we can explore the meanings, values and space of understanding so that we might echo with each other in a subtle and soulful way. Echoes could be ripples on the surface of the blue lake and sound waves flowing from the shell of the ocean. Our heartbeats synchronize and our minds get merged into the one at certain moment of life when words build the bridge, and we breathe with the same rhythm.
